AI Tool Prompt Engineering Report

Aaron Jan Rafael L. Malda

BS Computer Science - 2nd Year

21st Century IT Skills - 2B

Name of AI Tool

- Recraft v3

Purpose / Domain

To generate images in a single prompt.

Why I chose it

Replit AI is free and easy to use. Generated images are also stored in a “project,” which is essentially a whiteboard for all the images I want the AI to generate. This makes organizing the images much easier and visual.

My Initial Prompt

“Create an image of an ominous void in the universe. As seen from outer space, with an earth-like planet barely within frame, seen partially at the bottom left corner.”

Generated Image:

AI-Assisted Prompt

LLM Used:

- Gemini

“An atmospheric digital painting of an abyssal rift in the fabric of the universe. The void is textured with oily, dark nebulosity and faint, eerie ultraviolet tendrils. The edge of a lush, blue, and green planet peeks into the bottom-left frame, looking fragile and small. Moody lighting, dark ethereal aesthetic, inspired by H.P. Lovecraft, intricate detail, sharp focus.”

Generated Image:

Reflection

After seeing the results of my original prompt, I already felt somewhat satisfied with the generated results. I tried to describe what I wanted the void to look like and how the planet should be positioned within the frame, to the best of my abilities, and things turned out better than I expected. But after Gemini refined my prompt, I did not expect it to make the image that much better and fit the vibe I was aiming for even more so. The void looks and feels more ominous and Lovecraftian - like a wormhole that pulls everything near it to another dimension that other beings in the universe have been trying to avoid for who knows how long, along with the earth-like planet at the corner of the frame that is seemingly helpless against the impending doom, is exactly what I was looking for in these generated images. From this experience, I learned that prompt engineering is about being specific about what you want with the item that you want the AI to generate, simply because it is what AI is all about; without being specific, the AI tries to guess what you are trying to convey, which would often lead to mediocre results. Overall, I am very satisfied with how the AI-assisted prompt improved the generated image, and I am considering doing this more often to have better results in the future.
